

Well baby protocol

(Babies aged up to and including 182 days)

- Baby has¹:**
- microtia
 - atresia
 - bacterial meningitis
 - meningococcal septicaemia
 - programmable ventriculo-peritoneal shunts
 - confirmed congenital cytomegalovirus (cCMV)

Notes

1. Screening is contraindicated or not appropriate in these circumstances.
2. Delay of five hours between AOAE1 and AOAE2.
3. Screening outcomes:
BCR - clear response in both ears
NCR - no clear response in one or both ears
4. Refer for appropriate audiological assessment where there is any parental or professional concern.
